

Annual Report on Employee Number Changes

The waterfall chart depicts the company's employee count changes from 2006 to 2020. The company experienced consistent growth from 2006 to 2016, with the most significant increase of 76 employees occurring in 2011. However, a shift occurred in 2017, marking the beginning of a contraction phase that continued through 2020. Despite this recent downsizing trend, with the largest decrease of 25 employees in 2018, the overall 'Final Result' shows a net positive change of 198 employees over the entire period. This indicates that while the company has reduced its workforce in recent years, it has still maintained substantial growth since 2006. Alas, it is a part that needs to be improvements.
